

ProSOIL

pro soil turf & planter blend

Product Description

When it comes to quality soil products, there's little wonder our Pro Soil has become clearly recognized as the number one choice for BC's landscape professionals.

Our Pro Soils are premium quality compost-based soils formulated for turf and planter applications. Like all of our quality products, they are manufactured with our unique small batch blending process to ensure utmost consistency and quality. The nutrient-rich products made with recycled organic compost that will allow your plants and turf to thrive, not just survive.

They offer a lower total cost over the lifetime of the project as they require less maintenance, less fertilizer and herbicide. They also help reduce environmental impact by diverting thousands of cubic yards annually from our landfills.

Choose between our sand-based turf mix or our planter bed soil, depending on your application. Use the guides and tables below to help you select the correct soil for your project.

Our Blends

Pro Soil Turf Blend

- New turfgrass installations
- Topdressing
- On-slab planters requiring high infiltration rates

Property	Turf Mix
C/N	< 24
pH	7
Lime requirement	0
EC	< 3
Sand (dry wt.)	85 - 90
Fines (dry wt.)	3 to 4
Organics (dry wt.)	5 to 7
Total Nitrogen	0.2 to 0.3
Phosphorous	150 - 250
Potassium	300 - 750
Calcium	1600 - 1900
Magnesium	200 - 240

Pro Soil Planter Blend

- Shrubs and trees
- Planters
- Low traffic lawn areas

Property	Planter Mix
C/N	< 28
pH	7
Lime requirement	0
EC	< 3
Sand (dry wt.)	70 - 80
Fines (dry wt.)	5 to 12
Organics (dry wt.)	15
Total Nitrogen	0.3 - 0.4
Phosphorous	220 - 250
Potassium	400 - 800
Calcium	2800 - 3200
Magnesium	350 - 500

Our Commitment

We are committed to creating quality, nutrient-rich sustainable soils, that reduce our collective carbon footprint on this Earth.
